POWER WHEN YOU NEED IT

Case Study

Liverpool FC redeveloped its iconic Anfield stadium, as part of a £260m scheme for the whole Anfield area. The ground, famed for its Kop stand and thrilling big-game atmosphere in the Premier League and on Champions League nights, had its capacity extended by an extra 13,000 seats ready for the start of the 2016-17 season.

Power supplied

We provided a 700kVA open generator in a bespoke plant room with a separate acoustic package and one-off, specially designed, silencer and flue system.

Why DTGen?

DTGen was selected for this installation due to our extensive experience in major infrastructure developments, and our strong reputation for delivering complex projects.

Application

We supplied and installed a back-up power supply to the new main stand at Liverpool FC's famous Anfield stadium. The system provides guaranteed back-up power in the event of a mains failure.
